The global Fluorine-Free Solar Backsheet market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Fluorine-free solar backsheet is a photovoltaic backsheet without fluorine film. As an important part of isolating materials such as battery sheets and encapsulation film inside the module from the external environment, it is required to have excellent functions in terms of insulation, barrier and heat resistance. Fluorine-free backsheets are relatively poor in terms of their material properties in terms of resistance to damp heat, dry heat, and ultraviolet rays, and are mainly used in photovoltaic modules with relatively low weather resistance requirements.

This report studies the global Fluorine-Free Solar Backsheet production, demand, key manufacturers, and key regions.
