## Abstracts

The global Fluorine Lined Magnetic Pump market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The key feature of a fluorine-lined magnetic pump is its magnetic drive system. It consists of an external driving magnet and an internal driven magnet, which transmit rotational force through magnetic coupling without the need for traditional shaft seals. This design eliminates the risk of leakage and allows the pump to handle volatile, toxic, corrosive, and high-temperature fluids.

The wetted parts of a fluorine-lined magnetic pump, including the pump casing, impeller, and shaft, are typically lined with fluorine-based materials, such as polytetrafluoroethylene (PTFE). These fluorine materials exhibit excellent corrosion resistance, making them capable of withstanding various corrosive media. This design ensures the pump's reliability and durability when handling corrosive fluids.

Fluorine-lined magnetic pumps are commonly used in industries such as chemical processing, pharmaceuticals, electronics, and electroplating, where corrosive liquids are encountered. They are particularly suitable for transporting strong acids, alkalis, organic solvents, corrosive salt solutions, and other corrosive media, especially in applications that require leak-free and highly safe operations.

The advantages of fluorine-lined magnetic pumps include:

**Leak-free operation:** The magnetic drive system eliminates the need for shaft seals, ensuring a leak-free operation.

**Corrosion resistance:** The fluorine-lined wetted parts provide excellent resistance to corrosion, allowing the pump to handle corrosive media.

**High safety:** The absence of leaks and the sealed design make fluorine-lined magnetic pumps safer when handling toxic, volatile, and corrosive fluids.

**Low maintenance cost:** The elimination of shaft seals and lubricating oil reduces maintenance and the need for replacement parts.

A fluorine-lined magnetic pump is a special type of industrial pump designed for handling corrosive fluids without leakage. It incorporates both fluorine-lined wetted parts and a magnetic drive system.
