Abstracts

The global Fluorite market size is expected to reach \$ 5396 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Fluorite, also called fluorspar, is the common name of the mineral having chemical composition calcium fluoride (CaF₂). It is a mineral with veritable bouquet of brilliant colors from hallmark color purple to blue, green, yellow, colorless, brown, pink, black and reddish orange. The rich purple color is by far the most famous and popular color. It is an important commercial source of fluorine. Fluorite plays a vital role in the manufacture of aluminium, gasoline, insulating foams, refrigerants, steels and uranium fuel.

Globally, the production of fluorspar is mainly concentrated in China, Mongolia, Mexico, Europe and South Africa. Orbia is the largest manufacturer of fluospar while China is the largest consumer.

Fluorspar is the main source of Hydrofluoric Acid, a key ingredient for the production of fluorocarbons, used in refrigerants, air conditioning systems, and as feedstock in the production of various chemicals. The growing demand for these chemicals in industries like electronics, pharmaceuticals, and refrigeration is a major driver for fluorspar consumption.

This report studies the global Fluorite production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Fluorite and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering
