Abstracts

The global Fluorobenzene for Pharmaceutical and Pesticide market size is expected to reach \$ 967 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

In 2025, global Fluorobenzene for Pharmaceutical and Pesticide production reached approximately 102 k tons, with an average global market price of around US\$6,257 per ton. Fluorobenzene is an aryl fluoride and the simplest of the fluorobenzenes, with the formula C_6H_5F , often abbreviated PhF. A colorless liquid, it is a precursor to many fluorophenyl compounds. It is an intermediate for pharmaceuticals, pesticides and other organic compounds. In agriculture field, it is used as an insecticide, larvacide and as a reagent for plastic or resin polymers. In pharmaceutical field, it is mainly used to prepare antipsychotic drugs.

The global market for fluorobenzene used in pharmaceuticals and pesticides is on a steady growth track. As a basic fluorinated fine chemical, fluorobenzene serves as a key intermediate in synthesizing fluoroquinolone antibiotics and certain antipsychotic drugs, while in agrochemicals it is an essential building block for high-efficacy insecticides and herbicides. In the pharmaceutical sector, demand for fundamental antibiotics and chronic disease medications remains inelastic amid increased public health awareness and population aging, and the rising incorporation of fluorinated structures in mainstream drugs to improve efficacy and metabolic stability supports upstream consumption. In agrochemicals, modern plant protection programs consistently require higher efficacy and lower environmental impact, driving a gradual increase in the share of fluorinated pesticides, which offer strong target selectivity and favorable residue profiles, thereby creating stable demand for fluorobenzene-based

intermediates. Regionally, China has secured a notable advantage in large-scale fluorobenzene production, backed by integrated fluorochemical raw material capabilities, and consequently serves as a key supplier of intermediates to global pharmaceutical and agrochemical supply chains, while developed regions such as Europe and North America focus more on the R&D and manufacturing of finished fluorinated drugs and formulations. Within the ongoing extension of the fluorinated fine chemical value chain, fluorobenzene, as a core intermediate, will move largely in sync with the cyclical performance of the two downstream sectors. However, periodic constraints in the supply of upstream materials such as fluorspar and hydrofluoric acid, together with tightening safety and environmental regulations, are exerting structural upward pressure on operating costs among producers, which in turn affects the stability of overall industry margins. Overall, the market holds a solid fundamental base, with near-term growth potential depending largely on the launch schedule of major downstream products and the ability of suppliers to manage compliance-related costs.
