According to our (Global Info Research) latest study, the global Fluorochemicals market size was valued at USD 15750 million in 2023 and is forecast to a readjusted size of USD 20620 million by 2030 with a CAGR of 3.9% during review period.

Fluorochemicals are chemical compounds that contain fluorine. Fluorine is a highly reactive element and is derived from sources like fluorite (also known as fluorspar), fluorapatite, and cryolite. Fluorine has a number of desirable chemical properties like high electronegativity, and reactivity and tendency to form stable compounds.

Fluorocarbons was the largest segment of the global fluorochemicals market. These are compounds that are formed when fluorine is covalently bonded to carbon atoms in varying number and different configurations. The strength and stability of these covalent bonds give fluorocarbons their unique properties to function like refrigerants, lubricants, solvents, propellants, and stain-repellent products. The segment is expected to grow at a fast rate over the forecast period owing to the increase in its high demand for use across applications like blowing agents, packaging, solvents, refrigerants, and aerosol propellants.
