Fluorine rubber refers to a synthetic polymer elastomer containing fluorine atoms on the carbon atoms of the main or side chains. The introduction of fluorine atoms enables fluorine rubber to have excellent properties such as high temperature resistance, oil resistance, liquid resistance, good physical and mechanical properties, weather resistance, electrical insulation and radiation resistance, and compression permanent deformation resistance. Fluorine rubber used in aerospace is a special rubber material with excellent high temperature resistance, oil resistance, and chemical corrosion resistance, which is widely used in the aerospace field.
