The global Fluoroplastic Insulated Power Cable market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Fluoroplastic insulated power cable is a kind of power cable whose insulation layer is made of fluoroplastic material. Fluoroplastic, also known as polytetrafluoroethylene (PTFE), has excellent high temperature resistance, chemical stability and electrical insulation properties. Fluoroplastic insulated power cables are often used in situations requiring high temperature, corrosion resistance and electrical insulation properties. It has the following characteristics: High temperature resistance: Fluoroplastic insulation can maintain good performance at higher temperatures and can usually withstand temperatures up to 200°C. Corrosion resistance: Fluoroplastics have excellent chemical stability and good corrosion resistance against most chemical substances. Electrical insulation properties: Fluorine plastic has good electrical insulation properties and can effectively isolate the charge between the conductor inside the wire and the external environment.
