According to our (Global Info Research) latest study, the global Fluoropolymer Coated Fabric market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Fluoropolymer coated fabric is a type of fabric that has been treated with a fluoropolymer coating. Fluoropolymers are a type of synthetic polymer that contains fluorine atoms. They are known for their exceptional chemical resistance, low friction properties, and high temperature resistance.

The fluoropolymer coating is applied to the fabric to provide various benefits such as water repellency, stain resistance, and durability. It forms a protective barrier on the fabric surface, preventing liquids and stains from penetrating the fabric fibers. This makes the fabric easy to clean and maintain.

Fluoropolymer coated fabrics are commonly used in various industries and applications. They are often used in outdoor clothing and gear, such as rain jackets, tents, and backpacks, to provide waterproofing and weather resistance. They are also used in industrial applications, such as conveyor belts, gaskets, and seals, due to their chemical resistance and low friction properties.
