Fluoropolymer lined columns are industrial columns coated with a layer of fluoropolymer materials, such as PTFE, PFA, or FEP, known for their excellent chemical resistance and thermal stability. These columns are designed to withstand aggressive chemicals, high temperatures, and corrosive environments, making them ideal for applications in industries like chemicals, pharmaceuticals, and petrochemicals. The fluoropolymer lining provides a smooth, non-reactive surface that prevents contamination and extends the column's lifespan by protecting the underlying material, often metal, from corrosion. Fluoropolymer lined columns are particularly useful in processes such as distillation, absorption, and filtration, ensuring efficient performance and minimizing maintenance in harsh operational conditions.
