Abstracts

According to our (Global Info Research) latest study, the global Fluoropolymer-Lined Globe Valve market size was valued at US$ 91.61 million in 2025 and is forecast to a readjusted size of US$ 126 million by 2032 with a CAGR of 4.9% during review period.

A Fluoropolymer-Lined Globe Valve is a corrosion-resistant linear-motion valve in which the internal wetted surfaces of the valve body, disc/plug, seat, and other components exposed to the process medium are lined or encapsulated with fluoropolymers such as PTFE (Polytetrafluoroethylene), PFA (Perfluoroalkoxy Polymer), or FEP (Fluorinated Ethylene Propylene). The valve operates through the linear movement of a stem-driven disc or plug toward or away from the seating surface, enabling flow shut-off, isolation, throttling, or regulation. The metallic valve body provides the required mechanical and pressure-bearing strength, while the fluoropolymer lining isolates highly corrosive process media from the metallic substrate, thereby improving corrosion resistance and extending service life. In 2025, global Fluoropolymer-Lined Globe Valve production reached approximately 190.28 K Units. Key upstream raw materials for fluorine-lined globe valves include: fluoropolymers such as PTFE, PFA, and FEP (the most critical functional materials); valve body castings (ductile iron, cast steel, and stainless steel); stainless steel and corrosion-resistant alloys (for valve stems, plugs, and specialized internal components); and PTFE packing, gaskets, and sealing materials.

The global Fluoropolymer-Lined Globe Valve market is a specialized corrosion-resistant segment of the industrial valve industry. The market scope can include conventional manual, pneumatic and electric lined globe valves, as well as Fluoropolymer-Lined Globe Control Valves specifically designed for continuous flow regulation. These valves typically use carbon steel, ductile iron or stainless steel as the pressure-bearing body,

while wetted flow passages, plugs/discs and other critical components are lined or encapsulated with fluoropolymers such as PTFE, PFA, FEP and ETFE to isolate highly corrosive media from the metallic substrate. Conventional lined globe valves are primarily used for reliable shut-off and isolation, whereas lined globe control valves employ specially designed plugs, seats, actuators and positioners for continuous process control. Major applications include chlor-alkali, basic chemicals, fine chemicals, fluorochemicals, agrochemicals, pharmaceuticals, petrochemicals, new-energy materials, hydrometallurgy, and electronic and semiconductor chemicals.
