## Abstracts

The global Fluoroprotein Firefighting Foam market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The market for firefighting foam, including fluoroprotein foam, has been influenced by increasing concerns over the environmental impact of foam formulations containing fluorosurfactants. As a result, there has been a growing emphasis on developing and adopting environmentally friendly alternatives, such as fluorine-free foams. These foams aim to provide effective fire suppression while minimizing the potential environmental and health risks associated with traditional foam formulations.

Fluoroprotein firefighting foam is a type of firefighting foam used to suppress and extinguish fires involving flammable liquid hydrocarbons, such as gasoline, diesel, and crude oil. It is specifically formulated to combat Class B fires, which involve flammable liquids or gases.
