## Abstracts

Fluoroscopy and mobile C-arms devices are used to analyze parts of the body and work in a fashion similar to X-rays. The only difference is that fluoroscopy and mobile C-arms devices provide live images of the anatomy, making it more useful during surgical procedures. These equipment are mainly utilized in orthopedic operations such as arthrography and barium X-rays, in minimally invasive imaging during lumbar puncture, cardiac catheterization, and biopsies, and for the placement of intravenous catheters into veins and arteries.
