Flurbiprofen gel patch is a topical nonsteroidal anti-inflammatory drug (NSAID) used to relieve pain and inflammation in muscles and joints. It is applied to the skin surface by applying a drug gel containing flurbiprofen, which is absorbed through the skin to achieve local analgesic and anti-inflammatory effects. The patch is widely used to treat pain and discomfort caused by sprains, muscle strains, arthritis, etc. It is necessary to follow the doctor's advice when using it, especially when using it on children or for long-term use, you should consult a professional medical staff.

As a topical nonsteroidal anti-inflammatory drug, flurbiprofen gel patch has been widely praised for its convenient application method and local analgesic and anti-inflammatory effects. Compared with oral analgesics, it reduces gastrointestinal irritation and is suitable for relieving local muscle and joint pain. However, it is still necessary to pay attention to the skin allergic reactions and other side effects that may be caused when using it, especially for children and long-term users, who should be used under the guidance of a doctor. Overall, flurbiprofen gel patch provides an effective and relatively safe treatment option for many patients with chronic pain.
