## Abstracts

According to our (Global Info Research) latest study, the global Flush Actuator DIP Switch market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Flush Actuator DIP switch is a special type of DIP (Dual Inline Package) switch whose design feature is that the operating lever is flush with the housing and has no protruding or raised parts.

Key features of the Flush Actuator DIP switch include:

**Flat Operating Lever:** Compared to traditional DIP switches, the Flush Actuator DIP switch's operating lever is flush with the housing, with no protruding or raised parts. The operating lever is located on the face of the switch housing, making it easier to operate.

**DIP Switch Construction:** The Flush Actuator DIP switch is a dual in-line construction with a set of pins that plug into a circuit board hole. They are installed on the circuit board by plug-in and fixed on the circuit board by soldering.

**Adjustable Options:** Flush Actuator DIP switches typically have multiple switch positions with two or more selectable states on each switch position. By manually operating the operating lever, turn the switch to the corresponding state to select circuit options or adjust circuit parameters.

Flush Actuator DIP switches are widely used in electronic equipment for applications

such as function selection, parameter configuration, and status switching. They are usually used in communication equipment, computer hardware, household appliances, industrial control and other fields. Thanks to its flat joystick design, it is more convenient to operate, while having a reliable connection and stable performance.
