Abstracts

According to our (Global Info Research) latest study, the global Fluzoparib market size was valued at US\$ 44.24 million in 2025 and is forecast to a readjusted size of US\$ 115 million by 2032 with a CAGR of 7.6% during review period.

Fluzoparib is an oral small-molecule targeted anticancer drug that belongs to the class of poly (ADP-ribose) polymerase (PARP) inhibitors. It works by inhibiting PARP enzyme activity, blocking the repair of single-strand DNA breaks in tumor cells, thereby leading to the accumulation of DNA damage and ultimately inducing tumor cell death.

Fluzoparib is mainly used for the treatment of solid tumors such as ovarian cancer and breast cancer in patients with BRCA gene mutations, and it plays an important role in maintenance therapy and the treatment of recurrent tumors. The drug is characterized by convenient oral administration and strong targeting ability, but it may also cause adverse reactions such as anemia, nausea, and fatigue. In 2025, Global Fluzoparib Production Reached Approximately 1.2 Million units.

Fluzoparib, as a domestically developed PARP inhibitor, has rapidly emerged in China's targeted anti-tumor therapy market in recent years. Developed by Hengrui Pharmaceuticals, the drug is primarily used for the treatment of BRCA mutation-related tumors such as ovarian cancer, benchmarking against international products like Olaparib. With the advancement of precision medicine and the increasing adoption of genetic testing, the eligible patient population for PARP inhibitors continues to expand, driving sustained growth in demand for fluzoparib. At the same time, inclusion in national medical insurance negotiations has significantly reduced patients' financial burden and improved drug accessibility, enhancing its competitiveness in the domestic market. From a competitive landscape perspective, fluzoparib has gradually gained market share against imported drugs due to its pricing advantage and strong local

distribution channels. However, multiple PARP inhibitors from both domestic and international companies are being launched or are in late-stage clinical development, intensifying market competition. Looking ahead, the growth potential of fluzoparib will largely depend on the expansion of indications (such as breast cancer and prostate cancer), combination therapy strategies, and the accumulation of real-world evidence. Overall, driven by supportive policies and strong clinical demand, the fluzoparib market still holds significant growth potential, although it faces long-term challenges in innovation and differentiation.
