Abstracts

The global Flywheel Energy Storage Motor market size is expected to reach $ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The motor is the key part to convert the flywheel energy storage device from electrical energy into mechanical energy. The motor suitable for the flywheel energy storage system must meet the following conditions: the motor can operate in the motor working condition and the generator working condition respectively.

Bidirectional energy conversion; low no-load loss, high motor efficiency, ensuring long-term operation of the flywheel energy storage system and high overall energy conversion efficiency; wide motor speed regulation range, simple and reliable speed control method, meeting the operating speed of the flywheel energy storage system Range; the motor has high energy density and can output both large torque and large power. Permanent magnet motors have many excellent characteristics such as high power density, high power factor, wide speed range, high efficiency, small size, and good starting performance. With the continuous improvement of permanent magnet materials, the industry usually uses Permanent magnet motor in flywheel energy storage systems.
