Abstracts

The global FM Approved Diesel Engines market size is expected to reach \$ 441 million by 2032, rising at a market growth of 4.3% CAGR during the forecast period (2026-2032).

FM approved diesel engines are diesel power units that have passed the rigorous testing and auditing of FM in the United States and obtained its official certification, and are specifically used to drive critical fire protection systems such as fire pumps. In 2025, global FM Approved Diesel Engines production reached approximately 13,731 units, with an average global market price of around 22.9 K US\$/Unit. The production capacity of FM Approved Diesel Engines reaches 17,500 units, and the industry's gross profit margin is approximately between 20% and 40%.

The FM approved diesel engine industry chain covers upstream core component supply (such as high-pressure common rail systems, turbochargers, electronic control units, radiators and special oil pumps), midstream engine R&D and manufacturing integration, and downstream system integration and end-user applications (fire pump manufacturers or engineering companies integrate it with water pumps, bases, pipelines and control cabinets, and deploy it in high-risk locations such as buildings, petrochemicals, power, and data centers).
