Abstracts

According to our (Global Info Research) latest study, the global Folder Gluers market size was valued at USD 325.8 million in 2023 and is forecast to a readjusted size of USD 453.1 million by 2030 with a CAGR of 4.8% during review period.

The application of the folder gluers is the final process of the packing box in the packaging and printing industry. It is a machine that takes a stream of flat open box material (called blanks) that has been produced by a die-cutter and transforms each box into a finished product by folding and gluing the boxes. The process involves folding and sticking printed, die-forming cardboard. Folder Gluers instead of manual gluing, reduce labour cost and improve efficiency.

Folder gluers can process a wide variety of box materials including folding carton, corrugated board, micro flute, and so much more, and are most popular in industries like printing, packaging, and envelope manufacturing. These machines run from anywhere between 200,000 to over a million, depending on how sophisticated the machine is. The variations depend on size limitations, capabilities, and print sections for flexo folder gluers. Industries that use these machines include packaging, printing, and envelope manufacturing. There are several different kinds of materials that can be used such as paperboard, corrugated board, plastic, metalized varnished boards, microflutes, and more. These materials are used to make boxes, envelopes, bottle holders, and much more. Paperboard and corrugated are the most common materials used in these machines.

Global Folder Gluers key players include BOBST, Koenig & Bauer Duran, VEGA, etc. Global top 3 manufacturers hold a share over 33%.
