Abstracts

The global FMOC Protected Amino Acids market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

FMOC (9-fluoronemethoxycarbonyl) is a functional group commonly used to protect amino acids and is commonly used in solid-phase synthesis, especially in peptide synthesis. During the synthesis of peptides, in order to prevent specific functional groups in amino acids from being interfered with or damaged during the reaction, they need to be protected so that the protecting groups can be removed and the structure of the original amino acids can be restored after the synthesis is completed.

This report studies the global FMOC Protected Amino Acids production, demand, key manufacturers, and key regions.
