Abstracts

The global Foam Glass Brick market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Foam glass brick is made of foam glass as the main raw material. It can be made by adding a proper amount of foaming agent in the production process and heating in a high-temperature furnace. It has very uniform airtight pores. It is a special material, because it completely retains the stability of inorganic glass, and this material has low bulk density, low thermal conductivity, and no combustion and mildew. It will not be eaten by mice. It is a very corrosion resistant material.

This report studies the global Foam Glass Brick production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Foam Glass Brick, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
