Abstracts

The global Foam Hot Melt Machine market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Foam hot melt machine is a device that heats, melts and compresses waste foam plastic into blocks. It is mainly used to recycle foam materials and reduce pollution and resource waste. The working principle of the foam hot melt machine is to use spiral rotation to generate pressure to send the foam material into the heating cylinder. After multi-stage compression, the compressed foam material is pushed out of the discharge port. There are many types of foam hot melt machines, including cold pressing type, hot pressing type, hot melt type and hydraulic pushing type. Foam hot melt machines are used in packaging, construction, furniture and other industries, and can produce various packaging boxes, insoles, car interiors, mattresses, sound insulation materials, etc.

This report studies the global Foam Hot Melt Machine production, demand, key manufacturers, and key regions.
