According to our (Global Info Research) latest study, the global Foam Packaging Solutions market size was valued at US\$ 7552 million in 2023 and is forecast to a readjusted size of USD 12640 million by 2030 with a CAGR of 7.6% during review period.

Foam packaging solutions are packaging materials that utilize foam to protect and cushion products during storage, transportation, and handling. Foam used in packaging is typically a cellular material, which means it has a structure of numerous cells filled with gas (usually air). The most common types of foam used are expanded polystyrene (EPS), expanded polyethylene (EPE), and polyurethane (PU) foam.

EPS foam is made from polystyrene beads that are expanded through the application of heat and steam. EPE foam is produced by a process that involves cross - linking polyethylene resin under high - pressure steam. PU foam is created through a chemical reaction between polyols and isocyanates, resulting in a foam with a wide range of densities and physical properties.
