Abstracts

The global Foam Surfboard market size is expected to reach \$ 441 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

In 2025, the global production of foam surfboards reached 1.1481 million units, with an average selling price of US\$270 per board.

Foam surfboards are finished surfboards made primarily of foam or polymer materials such as EPS, EVA, IXPE, XPE, and HDPE, using methods such as hot-pressing, molding, vacuum bagging, epoxy bonding, or multi-layer sandwich structures. Foam surfboards focus on those with soft surfaces, high buoyancy, strong impact resistance, and high safety. Main product types include beginner longboards, soft-top funboards, soft-top fishboards, soft-top shortboards, children's surfboards, surf school teaching boards, durable rental boards, and some high-performance soft-top boards.

From a product development perspective, foam surfboards are undergoing a structural upgrade from low-priced hot-pressed boards to more durable, lightweight, controllable, and environmentally friendly designs. Traditional low-end products primarily use EPS cores, wood stringers, EVA or IXPE top layers, and HDPE bottoms, emphasizing cost and safety. Mid-to-high-end products enhance maneuverability through epoxy composites, vacuum bags, hard bottoms and soft tops, reinforced stringers, detachable high-performance fin systems, and more refined board designs. Some brands are beginning to emphasize recyclable foam, bio-based resins, low-toxicity materials, and longer lifespans to address environmental pressures in water sports equipment. Future product competition will no longer be solely about price, but will focus on durability, resilience, weight, environmentally friendly materials, board design, and channel efficiency.

In terms of production capacity, the industry exhibits characteristics of 'high technological barriers and brand concentration.' Major global production capacity is concentrated in North America, Europe, and East Asia, with a single production line annual capacity of approximately 47,000-49,000 units. The industry average capacity utilization rate is approximately 84%, and the gross profit margin reaches 23.7%.
