According to our (Global Info Research) latest study, the global Focal Plane Array Infrared Detector market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

A Focal Plane Array (FPA) Infrared Detector is a sophisticated sensor technology used to capture thermal images by detecting infrared radiation. The FPA consists of a grid of individual infrared-sensitive pixels, typically made from materials such as indium antimonide (InSb), mercury cadmium telluride (MCT), or microbolometers, each acting as a tiny detector that measures the infrared radiation emitted by objects in its field of view. When infrared radiation hits the array, it generates a signal that is processed to create detailed thermal images, showing temperature variations and heat patterns. FPA infrared detectors are widely used in applications such as thermal imaging cameras, night vision systems, medical diagnostics, industrial inspection, and environmental monitoring due to their high sensitivity and ability to produce high-resolution thermal images.
