Abstracts

Focused ion beam, also known as FIB, is a technique used particularly in the semiconductor industry, Deposition and increasingly in the biological field for site-specific analysis, deposition, and ablation of materials.

FIB systems operate in a similar fashion to a scanning electron microscope (SEM) except, rather than a beam of electrons and as the name implies, FIB systems use a finely focused beam of ions (usually gallium) that can be operated at low beam currents for imaging or at high beam currents for site specific sputtering or milling.

Scope of the Report:

This report focuses on the Focused Ion Beam (FIB) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Focused Ion Beam is primarily split into ion FIB system and FIB-SEM system. FIB-SEM system is a major technology with Revenue of 89% in 2016.

Europe is the largest sales region of Focused Ion Beam in the past five years. Focused Ion Beam market took up about 39% the global market in 2017, while USA was 24%.

Operating amid the relatively high level of competition, companies are more focused on product innovation and development and technological advancements to fortify their footing in the market. An instance is the introduction of a new generation focused ion beam scanning electron microscope by Zeiss in March 2017.

Hitachi High-Technologies, FEI, Carl Zeiss, are the key suppliers in the global Focused Ion Beam market. Top 3 took up about 61.54% in 2017.

The worldwide market for Focused Ion Beam (FIB) is expected to grow at a CAGR of roughly 4.0% over the next five years, will reach 280 million US\$ in 2023, from 220 million US\$ in 2017, according to a new GIR (Global Info Research) study.
