Abstracts

The global Focused Ion Beam (FIB) market size is expected to reach \$ 519 million by 2032, rising at a market growth of 3.7% CAGR during the forecast period (2026-2032).

Focused ion beam, also known as FIB, is a technique used particularly in the semiconductor industry, Deposition and increasingly in the biological field for site-specific analysis, deposition, and ablation of materials. FIB systems operate in a similar fashion to a scanning electron microscope (SEM) except, rather than a beam of electrons and as the name implies, FIB systems use a finely focused beam of ions (usually gallium) that can be operated at low beam currents for imaging or at high beam currents for site specific sputtering or milling.

Global Focused Ion Beam (FIB) key players include FEI, Carl Zeiss, Hitachi High-Technologies, JEOL, TESCAN, etc. Global top five manufacturers hold a share about 99%. Europe is the largest market, with a share about 35%, followed by USA, with a share about 25 percent. In terms of product, FIB-SEM is the largest segment, with a share about 90%. And in terms of application, the largest application is Etching, followed by Deposition, Imaging, etc.

This report studies the global Focused Ion Beam (FIB) production, demand, key manufacturers, and key regions.
