## Abstracts

The global Foil Blankets market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A foil blanket is an especially low-weight, low-bulk blanket made of heat-reflective, thin, plastic sheeting. They are used on the exterior surfaces of spacecraft for thermal control, as well as by people. Their design reduces the heat loss in a person's body, which would otherwise occur due to thermal radiation, water evaporation, or convection. Their low weight and compact size before unfurling make them ideal when space or weight are at a premium. They may be included in first aid kits and with camping equipment. Lost campers and hikers have an additional possible benefit: the shiny surface flashes in the sun, allowing its use as an improvised distress beacon for searchers and as a method of signalling over long distances to other people.

This report studies the global Foil Blankets production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Foil Blankets, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
