Foil boards are a type of watercraft designed for surfing, kiteboarding, and wakeboarding that utilize a hydrofoil attached to the bottom of the board. The hydrofoil, which consists of a mast and wing, extends below the water's surface and generates lift as the board moves forward, allowing it to rise above the water. This design reduces drag and provides a smoother, more efficient ride over the water's surface. Foil boards are known for their ability to glide effortlessly and maintain speed even in lighter wind conditions or smaller waves, making them popular among watersports enthusiasts seeking a new and advanced riding experience.
