Abstracts

A wheelchair is a chair with wheels that replaces walking aids for people with reduced mobility. The main users are usually the wounded, the sick, the disabled, the elderly, etc., so that they can go out for activities. Children with disabilities do not buy large wheelchairs, and they are prepared not to buy them in the future, because the spine of large wheelchairs will cause scoliosis in children with disabilities. Wheelchairs not only meet the needs of the physically disabled and those with reduced mobility, but more importantly, facilitate family members to promote and take care of the disabled, enabling them to use wheelchairs for physical exercise and participation in social activities.
