Abstracts

The global Folic Acid market size is expected to reach \$ 172 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Folic acid, also known as vitamin B9, is a water-soluble B vitamin that the human body cannot synthesize and naturally exists in certain foods. Folic acid can be used as a food additive and as a dietary supplement. This report focuses on folic acid raw materials, specifically food-grade and pharmaceutical-grade folic acid.

Driving Factors

1. Increased Consumer Health Awareness and Preventive Healthcare Needs

Consumers' growing understanding of the health benefits of folic acid directly drives demand for related products.

Pregnancy Health and Birth Defect Prevention: This is one of the core driving forces. Global authoritative health organizations strongly recommend that pregnant women supplement with folic acid to prevent neural tube defects in the fetus (such as spina bifida). In some Asian countries, such as China, approximately 30%-40% of the population has gene defects related to folic acid metabolism and needs to supplement with active folic acid to ensure effective absorption.

Other Health Benefits: Studies show that folic acid helps lower homocysteine levels in the blood, thereby reducing the risk of cardiovascular diseases (such as heart disease and stroke). It also plays an important role in maintaining cognitive function, preventing age-related cognitive decline, and supporting overall health.

2. Government Food Fortification Policies and Public Health Projects

Government-led nutrition fortification programs are the most powerful and direct single factor driving market growth.

Implementation of Fortification Programs: Many countries worldwide (such as the United States, Canada, and Malaysia) have mandated the addition of folic acid to staple foods such as flour, cornmeal, and rice. These initiatives are expanding into more emerging economies, such as Asia-Pacific, Latin America, and Africa, directly creating significant demand for food-grade folic acid.

Investment in Maternal and Child Health Projects: Increased government investment in maternal and child health projects has driven the adoption of folic acid.

3. Widespread Application and Innovation: Folic acid applications have expanded from the pharmaceutical industry to several rapidly growing sectors, creating new growth points.

Dietary Supplements (including ?Oral Beauty?): Folic acid is a core ingredient in multivitamin and B-complex supplements. ?Oral beauty? is an emerging trend, with folic acid, due to its role in cell regeneration and combating oxidative stress, being added to supplements claiming to improve skin, hair, and nail health, experiencing rapid growth, particularly in North America and Europe.

Animal Feed: In animal nutrition, folic acid is used in poultry and pig feed to enhance growth performance and reproductive efficiency. While currently accounting for approximately 20% of total consumption, this demand is growing at a higher-than-average compound annual growth rate (CAGR) in Southeast Asia and Latin America, where livestock farming is highly intensive.

Functional Foods: As consumers increasingly favor healthy eating, the demand for fortified foods rich in folic acid (such as plant-based dairy alternatives and protein bars) is constantly increasing, especially in areas with high awareness of lifestyle-related disease prevention.

Pharmaceutical Raw Materials (APIs): Pharmaceutical-grade folic acid is an important raw material for various drugs (such as multivitamin preparations and anemia treatments), and its market growth is stable.
