## Abstracts

According to our (Global Info Research) latest study, the global Follow-up Grinding Machine market size was valued at US\$ 558 million in 2024 and is forecast to a readjusted size of USD 756 million by 2031 with a CAGR of 4.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The follow-up grinding machine is a high-precision, highly automated grinding equipment that uses advanced follow-up control technology to adjust various parameters in the grinding process in real time to ensure that the shape, size and surface quality of the workpiece meet the expected requirements. Its core advantage is that it can sense the shape or position changes of the workpiece through sensors and control systems, and automatically adjust the position, feed rate or angle of the grinding head, thereby achieving precision machining of parts with complex shapes. Unlike traditional grinders, the machining process of the follow-up grinder not only relies on fixed working parameters, but also continuously adjusts the feedback system, so that even in the face of workpiece errors, clamping errors or irregular shapes, it can still maintain high-precision machining effects.
