Abstracts

The global Food Additives Microcrystalline Cellulose market size is expected to reach \$ 311 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

Food Additives Microcrystalline Cellulose is a purified, partially depolymerized cellulose derived from plant-based alpha-cellulose, commonly identified as E460(i) / INS 460. In food systems, it is used as an insoluble, low-calorie functional additive for anti-caking, suspension stabilization, emulsification support, bulking, texture improvement and fat replacement in dairy products, beverages, frozen desserts, bakery, seasonings and nutraceutical products. In 2025, global Food Additives Microcrystalline Cellulose production reached approximately 45.83 K MT.

The market is mainly driven by the continued expansion of processed food, convenience food, powdered nutrition, low-fat dairy, frozen desserts and ready-to-drink products. Microcrystalline cellulose is attractive to food formulators because it is plant-derived, low-calorie, insoluble and highly functional. It can improve powder flow, reduce caking, stabilize suspensions, improve mouthfeel and help replace fat without introducing synthetic-sounding additives. This makes it especially useful in clean-label and health-oriented food systems, where manufacturers need texture, stability and cost control at the same time.

Another important driver is the overlap between food, nutraceuticals and dietary supplements. MCC is widely used in tablets, capsules, granules and powdered nutrition formats as a binder, filler, flow aid and texture modifier. As functional foods, sports nutrition, weight-management products and dietary supplements continue to grow, food-grade and nutrition-grade MCC demand benefits from both food additive use and

supplement excipient use. Asia-Pacific, especially China and India, is becoming increasingly important because the region combines low-cost manufacturing, fast-growing processed food consumption, and a large pharmaceutical and nutraceutical production base.

This report studies the global Food Additives Microcrystalline Cellulose production, demand, key manufacturers, and key regions.
