Abstracts

The global Food Clear Cling Film market size is expected to reach \$ 4757 million by 2032, rising at a market growth of 3.6% CAGR during the forecast period (2026-2032).

Food clear cling film refers to a transparent film type food contact packaging material used for food covering, wrapping, refrigeration, freezing, short-term storage, and fresh display. It is usually made of resins such as PE, PVC, PVDC, etc., and is processed through blowing, casting, cutting, and winding techniques. It has the characteristics of high transparency, good adhesion, moisture loss barrier, anti cross flavor, maintaining food appearance display, and prolonging short-term freshness. It is mainly used in home kitchens, supermarkets, fresh food, catering, central kitchens, cold chain distribution, prefabricated food, and food processing. In 2025, global Food Clear Cling Film production reached approximately 1,217 K MT, with an average global market price of around US\$ 2,964 per MT.

Food clear cling film belongs to a mature category with high consumption frequency, wide application scenarios, and stable demand in food packaging. Its transparent display properties make it highly practical in supermarkets, fruit and vegetable trays, meat trays, cooked food covers, catering preparation, and home kitchens. The growth mainly comes from standardized packaging in fresh retail, expansion of food delivery and central kitchens, demand for household refrigerated and frozen storage, increased consumption of pre packaged food, and consumers' attention to food hygiene, preventing cross contamination, and reducing food waste. In terms of material structure, PE transparent cling film has increased its proportion in household and general food scenarios due to its good food contact safety and universal adaptability. PVC transparent cling film still maintains a high demand in supermarkets, fresh food and catering large roll films due to its adhesive, stretchability and transparency advantages.

However, the safety awareness of plasticizers and environmental pressure will limit long-term growth. PVDC and high barrier transparent film are suitable for high preservation requirements scenarios such as meat, cooked food and refrigerated food. PLA and degradable transparent cling film have trend value but are limited by cost, strength and transparency stability in the short term. In the future, the focus of competition will be on food contact safety, high-definition transparency, plasticizer free, anti fog, anti cross flavor, freeze resistance, microwave adaptation, lightweight, biodegradable materials, and stable supply of commercial rolls. Enterprises with resin formulation capabilities, film processing stability, food grade compliance certification, and channel coverage capabilities are more likely to obtain stable orders.
