Abstracts

The global Food Contact Defoamers market size is expected to reach \$ 1337.9 million by 2029, rising at a market growth of 5.7% CAGR during the forecast period (2023-2029).

The global key players of food contact defoamers include Dow, Wacker Chemie, Elkem, BASF, Shin-Etsu Chemical, Momentive Performance Materials, and DyStar Group, etc. the top six manufacturers hold a share of 46%. Asia is the largest market of food contact defoamers, with a share of 38 percent around, followed by North America (30%) and Europe (22%). In terms of product, Silicone-based defoamer is the largest segment, hold a share about 68%, and in terms of application, food processing, sugar industry and fermentation industry are key applications, holding a share of nearly 80 percent.

Defoamers are a key product in many industrial processes. Their use allows to increase the production capacity and the quality of the final products. Controlling and reducing the level of foam improves the performance of production processes as it allows the containers to be used to their maximum capacity, preventing overflows and facilitating pumping.

In the case of the food industry, it is common to use defoamers based on polydimethylsiloxane type silicone emulsions (food code E-900), which offer excellent results at low dosages, a high persistence of the defoaming effect and a high reliability in their effectiveness.
