According to our (Global Info Research) latest study, the global Food Contact Materials (FCM) Testing market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Food contact materials (FCMs) are substances that come into contact with food during its preparation, processing, packaging, storage, or transport. FCMs can include a wide range of materials, such as plastics, metals, paper, and textiles. Food contact materials testing is a set of tests that are used to ensure that Food contact materials are safe for use with food. The tests are designed to assess the migration of substances from the Food contact materials into food, as well as the toxicity of those substances.

The global food contact materials (FCM) testing market growth is driven by a number of factors, including:

**Increasing demand for processed foods:** The demand for processed foods is growing rapidly, due to the convenience and longer shelf life of these foods. Processed foods often come into contact with food contact materials, such as plastics, metals, and paper. This is driving the demand for food contact material testing.

**Growing awareness of food safety:** There is a growing awareness of the importance of food safety among consumers. This is leading to increased demand for food contact material testing, as consumers want to be sure that the food they eat is safe.

**Regulatory requirements:** There are a number of regulatory requirements that govern the use of food contact materials. These requirements vary from country to country, but

they all aim to ensure the safety of food. food contact material testing is required to meet these regulatory requirements.

**Advancements in technology:** There have been advancements in the technology used to test FCMs. This has led to the development of more efficient and cost-effective food contact material testing methods.
