The global Food Contact Substance Testing Solutions market size is expected to reach \$ 1103 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

Food Contact Substance Testing Solutions refer to third-party laboratory testing, technical assessment and compliance verification services performed on materials, components and finished articles intended to come into contact with food. The scope primarily covers food packaging, containers, tableware, cookware, food-processing contact parts, food-contact components in small kitchen appliances, and related raw materials or converted products. These services are used to evaluate whether a material or article, under its intended conditions of use, may transfer substances into food at unsafe levels, alter food quality or sensory properties, or fail to meet regulatory limits in target markets. Typical testing programs include overall migration, specific migration, elemental release, restricted substance testing, BPA, phthalates, primary aromatic amines, formaldehyde, melamine, PFAS, volatile substances, non-intentionally added substances screening, extractables and leachables evaluation, sensory taint and odour testing, and multi-jurisdictional compliance assessment. Deliverables usually include laboratory test reports, compliance opinions, technical documentation support, declaration-of-compliance support, and testing-linked certification or conformity schemes for food packaging manufacturers, food and beverage brands, retailers, importers, kitchenware and appliance brands, food equipment suppliers and cross-border trade participants.
