## **Abstracts**

A food container is a container for the convenience of people to store and carry food, usually divided into plastic food containers, metal food containers, glass food containers and cardboard food containers, etc.

### **Scope of the Report:**

This report focuses on the Food Containers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The global market for food containers is expected to be chiefly driven due to the significant rise in food output globally. The increasingly sophisticated consumer today is demanding convenient packaging that is easy to carry, store, and allows ready consumption of food. Hence, it has become highly important for food container manufacturers to keep pace with these changing consumer preferences. The report segments the market in terms of product into food container varieties such as paperboard food containers, bags and pouches, plastic food containers, metal food containers, glass food containers, and raw materials food containers. Of these, bags and pouches are expected to witness high demand from consumers owing to benefits such as visual appeal, ease of portability, convenience, and freshness protection. Ease of product differentiation and excellent branding opportunities make bags and pouches amongst food companies as well. These factors are expected to compel food container companies to focus more on this segment in the next few years.

The worldwide market for Food Containers is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in

2017, according to a new GIR (Global Info Research) study.
