Abstracts

Food contaminant testing is to detect toxic or potentially harmful substances existing in food, such as pathogens, pesticides, gmo, toxins, etc.

Scope of the Report:

This report studies the Food Contaminant Testing market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Food Contaminant Testing market by product type and applications/end industries.

The pathogens segment includes pathogens such as E. coli, salmonella, campylobacter, and listeria. The diverse weather conditions in different regions may cause a pathogenic attack. This is compelling vendors to come up with products and solutions to detect the presence of food-borne pathogens. For instance, a bacterial protein isolated from the intestine of chicken can be used as a food preservative and to prevent the growth of food poisoning causing agents.

The market for food contaminant testing is witnessing growth in the meat and poultry segment because meat and poultry products are more vulnerable to contamination. The demand for meat production is increasing around the globe, motivating major manufacturers such as Thermo Fisher Scientific to offer food contamination test kit solutions. For instance, RapidFinder Poultry ID Kit provides sensitivity down to 0.01% poultry DNA and detects both raw and processed poultry meat.

The global Food Contaminant Testing market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in

China, also fast growing India and Southeast Asia regions. North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Food Contaminant Testing.
