The global Food Data Management Software market size is expected to reach \$ 2921 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

Food Data Management Software is a software system designed for food and beverage companies, food retailers, restaurant chains, central kitchens, ingredient suppliers, and cold chain logistics companies. It centrally manages information such as food product master data, formulas/nutritional components, raw material specifications, allergens, label compliance, quality testing, HACCP/FSMA/GFSI records, batch traceability, supplier qualifications, and production and distribution data. Its core value lies in digitizing, structuring, and making traceable key data from R&D, procurement, production, quality inspection, warehousing, distribution, to recalls. Fuji Electric's description of its food traceability system also emphasizes that such systems are used to uniformly manage various data across the food chain and achieve information collection, correlation, traceability, and analysis.
