According to our (Global Info Research) latest study, the global Food Dehydrators market size was valued at USD 209.7 million in 2023 and is forecast to a readjusted size of USD 308 million by 2030 with a CAGR of 5.6% during review period.

A food dehydrator refers to a device that removes moisture from food to aid in its preservation. A food dehydrator uses a heat source and air flow to reduce the water content of foods. The water content of food is usually very high, typically 80% to 95% for various fruits and vegetables and 50% to 75% for various meats. Removing moisture from food restrains various bacteria from growing and spoiling food. Further, removing moisture from food dramatically reduces the weight of the food. Thus, food dehydrators are used to preserve and extend the shelf life of various foods.
