According to our (Global Info Research) latest study, the global Food Dryer market size was valued at USD 1872.3 million in 2023 and is forecast to a readjusted size of USD 2467 million by 2030 with a CAGR of 4.0% during review period.

Food Dryer is defined as a machine of heat under controlled conditions, to remove the water present in foods by evaporation to yield solid products. It differs from evaporation, which yields concentrated liquid products. The main purpose of drying is to extend the shelf-life of foods by reducing their in-water activity. Micro-organisms which cause food spoilage and decay and many of the enzymes which promote undesired changes in the chemical composition of the food are unable to grow, multiply or function in the absence of sufficient water.
