Abstracts

The global Food Grade Calcium Acetate market size is expected to reach \$ 22.85 million by 2032, rising at a market growth of 2.8% CAGR during the forecast period (2026-2032).

Calcium acetate is the calcium salt of acetic acid (chemical formula $\text{Ca}(\text{C}_2\text{H}_3\text{O}_2)_2$). In industry it is sold as a white to off-white powder or granules, and it is used mainly because it is a convenient way to deliver acetate ions and calcium ions in a stable solid form.

Food grade calcium acetate is calcium acetate manufactured and sold for use in foods as a permitted additive, with tighter control of purity, contaminants, and documentation than industrial material.

Food grade demand can still be sensitive to cost cycles, because calcium acetate is closely tied to the cost of upstream acetic acid and energy for drying. When those costs rise, food manufacturers may look harder at substitution (other acetate salts, lactates, or alternative pH systems), especially in price-sensitive product categories. The result is a market that grows steadily with food volumes, but where supplier competitiveness is often decided by delivered cost, regulatory comfort across regions, and the ability to pass customer audits smoothly.

In 2025, global Food Grade Calcium Acetate production reached approximately 5.9 K MT, with an average global market price of around US\$ 2965 per MT. The global single-line production capacity ranges from 400 to 600 MT per year. The industry's gross profit margin is approximately 25%-35%.

The food grade market is often driven by quiet but durable demand: steady packaged food output, ongoing product reformulation, and the need for stable supply of widely used, low-cost functional ingredients. Calcium acetate can be used for pH control and stability needs in some formulations, and producers value it because it is a dry, easy-to-handle salt that fits standard dosing systems. A key trend is that big food manufacturers

increasingly treat compliance and documentation as part of product value, not a checkbox. That pushes food grade suppliers to invest in traceability systems, consistent particle size and flow behavior (to reduce caking and dosing errors), and predictable quality from batch to batch. Another trend is that food companies are trying to reduce operational risk: more dual-sourcing, more regional backup suppliers, and more audit requirements. This does not necessarily make the market ?high growth,? but it can shift share toward suppliers with stable quality systems and reliable logistics.

This report studies the global Food Grade Calcium Acetate production, demand, key manufacturers, and key regions.
