Abstracts

According to our (Global Info Research) latest study, the global Food Grade Hydroxytyrosol market size was valued at US$ 48.83 million in 2025 and is forecast to a readjusted size of US$ 68.37 million by 2032 with a CAGR of 5.0% during review period.

Food grade hydroxytyrosol, also known by the trade name "allicin," is a polyphenolic compound naturally found in foods such as olives and olive oil, and has gained widespread attention due to its excellent antioxidant properties. As an antioxidant, hydroxytyrosol helps reduce oxidation reactions in food, extending shelf life and preserving flavor.The main upstream raw material comes from olive-related products and byproducts. Downstream, thanks to its strong antioxidant properties, it can be used in baked goods, beverages, yogurt, oils, sauces, meats, and other products.Global sales in 2024 were approximately 700 tons, with an average market price of approximately US$65/kg. The industry's gross profit margin ranges from 15% to 30%.

In the EU and the US, hydroxytyrosol is already legally permitted for use in food. In July 2024, China's National Health Commission officially approved hydroxytyrosol as a new food additive (antioxidant). In the future, more and more countries and regions are likely to adopt hydroxytyrosol as a food additive (antioxidant) for the purpose of extending food shelf life and maintaining the stability of food color and flavor.
