Abstracts

The global Food Grade Magnesium Silicate market size is expected to reach \$ 172 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

In 2025, the global production of Food Grade Magnesium Silicate reached approximately 31.5 thousand tons, with an average selling price of USD 3,200 per ton, a production capacity of approximately 41.0 thousand tons, and a gross margin of 24.5%.

Food Grade Magnesium Silicate is a white or off-white amorphous porous powder generally produced from soluble silicates and magnesium salts through precipitation, filtration, washing, drying, and grinding. It is commonly associated with CAS No. 1343-88-0. The scope of this report primarily covers synthetic and activated magnesium silicate that meets food-processing quality and impurity-control requirements, excluding natural talc and general industrial-grade magnesium silicate. Owing to its large specific surface area and adsorption capacity, the product can remove free fatty acids, soaps, metal ions, pigments, moisture, and other polar impurities from edible oils. Its main applications include edible oil refining, frying oil purification, food filtration, and selected anti-caking and food-processing uses. Manufacturer information indicates that synthetic magnesium silicate is commonly prepared by precipitating sodium silicate with soluble magnesium salts, producing a porous and amorphous adsorbent structure.

The global Food Grade Magnesium Silicate market is a specialized segment of food-processing aids and functional adsorbent materials. Demand is concentrated in edible vegetable oil refining, frying-oil maintenance, oil decolorization and purification, and food-powder processing. Edible-oil and frying-oil purification represent the principal applications, as activated food-grade magnesium silicate can reduce free fatty acids,

soaps, residual catalysts, odors, pigments, and other impurities, thereby extending oil life and improving filtration efficiency. Public manufacturer information shows that the product is commonly supplied in industrial packages of 15 or 25 kilograms, while some producers have developed annual production capacities measured in thousands of tons, indicating that the market is based primarily on specialized bulk supply rather than laboratory reagent sales.

This report studies the global Food Grade Magnesium Silicate production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Food Grade Magnesium Silicate and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
