Abstracts

According to our (Global Info Research) latest study, the global Food Grade Molasses market size was valued at US$ 617 million in 2025 and is forecast to a readjusted size of US$ 863 million by 2032 with a CAGR of 4.9% during review period.

Food Grade Molasses refers to high-quality molasses products that comply with food safety standards and are suitable for direct consumption or further processing in food, beverage, and related industries. Food grade molasses is primarily derived from sugarcane or sugar beet during the sugar production process and undergoes additional refining, filtration, and concentration treatments to reduce impurities and improve purity, stability, and consistency. Compared with feed-grade or industrial-grade molasses, food grade molasses generally features higher sugar content, lower ash and impurity levels, and stricter requirements regarding heavy metals, microbiological safety, and chemical residues. It mainly contains sucrose, glucose, fructose, minerals, organic acids, and natural flavor compounds, providing a distinctive caramel-like flavor and dark color. Food Grade Molasses is widely used in natural sweeteners, bakery products, confectionery, sauces, beverages, nutritional foods, and natural food ingredients. Driven by growing consumer demand for natural ingredients, clean-label products, and plant-based food additives, food grade molasses has become a valuable functional ingredient in the global food and beverage industry.

In 2025, global Food Grade Molasses production reached approximately 2 Million Tons , and average price was USD 300/Ton , with gross margin 30% .
