Abstracts

The global Food-Grade PCR Resin market size is expected to reach \$ 10561 million by 2032, rising at a market growth of 11.6% CAGR during the forecast period (2026-2032).

Food-grade PCR resin refers to post-consumer recycled plastic resins that meet strict food-contact safety standards through advanced sorting, decontamination, and recycling processes. In 2025, the average global selling price of food-grade PCR resin is estimated at approximately US\$2,350 per metric ton, with global sales volume reaching around 2.05 million metric tons. The industry typically maintains a gross margin range of 22%–40%, supported by regulatory mandates, brand sustainability commitments, limited qualified supply, and premium pricing for certified food-contact compliance. The value chain includes upstream post-consumer plastic collection and sorting, midstream washing, decontamination, mechanical or chemical recycling, and downstream applications in food and beverage packaging, including bottles, containers, and films.
