The global Food Grade Plastic Packaging market size is expected to reach \$ 47470 million by 2029, rising at a market growth of 5.0% CAGR during the forecast period (2023-2029).

Food grade plastic packaging is one of the best materials to ensure the food safety and quality of products. Plastic has good barrier properties, meaning it protects packaged food from potential contaminants. The barrier quality of the packaging also affects the shelf life of the product, preventing it from spoiling or losing quality, thereby reducing food waste going to landfills. Some food-grade plastics are also recyclable.
