According to our (Global Info Research) latest study, the global Food Grade Polyglutamic Acid market size was valued at USD 102.9 million in 2022 and is forecast to a readjusted size of USD 133.8 million by 2029 with a CAGR of 3.8% during review period.

The development trend for food grade polyglutamic acid is expected to be positive in the coming years. Polyglutamic acid (PGA) is a biodegradable polymer that is derived from fermented soybeans. It has various applications in the food industry, including as a food additive, thickener, and stabilizer. One of the key trends driving the development of food grade PGA is the increasing demand for natural and clean label ingredients. Consumers are becoming more conscious about the ingredients in their food and are seeking out products that are free from artificial additives and preservatives. PGA is a natural ingredient that can be used to replace synthetic additives, making it an attractive option for food manufacturers. Another trend driving the development of food grade PGA is the growing interest in plant-based and vegan products. PGA is derived from plant sources and is suitable for use in vegetarian and vegan food products. As the demand for plant-based alternatives continues to rise, the use of PGA in these products is expected to increase.
