## Abstracts

According to our (Global Info Research) latest study, the global Flow Cytometer Reagents market size was valued at USD 2421.7 million in 2023 and is forecast to a readjusted size of USD 3812.8 million by 2030 with a CAGR of 6.7% during review period.

Flow cytometer reagents are used for calibrating, maintaining, validating and conducting or supporting the experiments. Thus, they are essential for the normal and satisfactory working of the instrument. Calibration reagents are used for validating that the instrument records the values consistent with the actual or real concentration or number of cells. These are proprietary and contain particle concentration in a narrow range. The buffers are used to maintain the pH of the solutions used in flow cytometry. Specificity reagents are used to bind selectively to the sample particles so as to ease detectability.

The market for flow cytometer reagents is rising fast due to increasing use of flow cytometry in pharmaceutical and biotechnological industry, launch of new reagents for specific applications like diagnostics & drug discovery, development of user-friendly & software, growing prevalence of infectious diseases etc. The market restraints are the high cost of the flow cytometer reagents because of the proprietary nature of most reagents and the lack of transparency in the market.
