Abstracts

The global Food Grade Sodium L-Ascorbate market size is expected to reach \$ 228 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Food-grade L-sodium ascorbate is a safe and highly effective sodium salt of Vitamin C. Commonly utilized as a food additive, it serves functions such as providing antioxidant protection, nutritional fortification, and enhancing food stability. It presents as a white to pale yellow crystalline powder that is highly soluble in water and possesses a slightly saline taste; it can effectively substitute for Vitamin C in applications such as fruit juices and meat products.

In the upstream segment, the production process typically begins with glucose as the starting material. Through a series of steps?including sorbitol synthesis, biological fermentation, and oxidation?it is converted into 2-keto-L-gulonic acid (2-KLG). This intermediate is then transformed into L-ascorbic acid, which subsequently undergoes neutralization (salt formation), crystallization, drying, and classification to yield food-grade L-sodium ascorbate. The core focus of the midstream segment lies in controlling food-grade specifications and managing product purity and stability. The downstream segment primarily feeds into food processing and nutritional fortification systems, with typical end-use applications encompassing meat products, baked goods, beverages, and nutritional supplements.

In 2025, global sales volume is projected to reach approximately 42,000 tons, with prevailing market prices ranging from approximately USD 3,500 to USD 4,200 per ton, and gross margins typically falling between 25% and 35%.
